By this document it will be confirmed that the following JTAG devices, the listed pins, nets and included components are being affected by the previously generated SVF files which could be played by a programmer of ProMik GmbH in separate way by using the SVF Player software for determining missmatches at the boundary scan chain

1 JTAG device: U10

The previously generated SVF files are covering for the JTGA device U10 totally 116 different pins, 64 different nets and 76 different connected components
